### PROJECT DESCRIPTION

**FY2018:** (WW1901A) Davis Rd 1 & 2 LS Improvements- Both lift stations were constructed in the mid-eighties and require wet well rehab, pump, piping & panel replacement. Design: \$96,000

**FY2019:** (1) Waterford Park #1 & 2 LS Improvements- Both lift stations were constructed in the mid-eighties and require wet well rehab, pump, piping and panel replacement. Design: \$78,950 (WW1901B); (2) Davis Rd 1 & 2 LS Improvements Construction: \$651,500 (WW1901A)

**FY2020:** (1) Waterford Park 1 & 2 LS Construction: \$825,000 (2) South Shore #1 & #2 LS Improvements: Both Stations are Dry Pit/Wet Well configuration and candidates for submersible conversion for improved reliability and safety. Design: \$122,500

**FY2021:** (1) South Shore #1 & #2 LS Improvements Construction: \$750,000; Glen Cove lift station dry pit/wet well, submersible conversion for improved reliability and safety. Design: \$150,000

**FY2022:** Construction of Glen Cove lift station improvements : \$900,000

**FY2023:** East Main Lift Station dry pit/wet well submersible conversion for improved reliability and safety. Design \$150,000

**FY2024:** Construction of East Main Lift Station improvements: \$1,000,000

### PROJECT JUSTIFICATION

The majority of the City's lift stations have seen capacity improvements and rehabilitation activity in past years, through the City's on-going Capital Improvement Program and O&M funded projects. All of the above mentioned sites were constructed in the early eighties and are critical stations serving large areas. Although improvements have occurred through past years the some of the pumps and associated piping will have been in service for close to forty years at the time of proposed construction. Dry Pit lift station designs from this era had few consideration for Operation & Maintenance efficiencies and/or related safety issues. SS 1 & 2, Glen Cove , and East Main lift stations have been subjected to flooding of dry pits during tropical weather events of the past where the complete function of the facility was lost until electrical and pumps could be restored. These proposed conversion improvements will enhance operability and safety of these sites fort the long term future.
