

Lower Brazos River Coalition Executive Committee

Chair: L.M. "Matt" Sebesta, Jr., P.E.,
Brazoria County Judge

Vice Chair: Ivan Langford,
Gulf Coast Water Authority

Secretary: Gene Fisseler, NRG Energy

Treasurer: Gary Basinger,
The Economic Development Alliance for
Brazoria County

*The Brazos is the longest river
inside Texas - flowing from the
Texas Panhandle to Dallas, Waco
and the Gulf of Mexico.*

IF YOU SUPPORT A HEALTHY BRAZOS RIVER,

stand with us to
work for
responsible,
balanced
management of this
natural resource.

KEEP THE WATER FLOWING FOR A HEALTHY BRAZOS RIVER

LOWER BRAZOS RIVER
COALITION

About the Lower Brazos River Coalition

The Lower Brazos River Coalition is a grassroots partnership of concerned individuals, organizations, municipalities, ranchers and farmers, environmentalists and conservationists, businesses and industries seeking fair and effective Brazos River water supply management.

The LBRC seeks to ensure the river's limited resources are developed and managed for the benefit of all. The Coalition provides a collective voice for downstream interests as competition for water increases.

Join us today!
Keep the Brazos River flowing.

The LBRC is a Task Force of The Economic Development Alliance for Brazoria County.

PROBLEM

Prolonged drought over the past 6 1/2 years has affected major portions of the Brazos River watershed and these conditions are projected to continue for the foreseeable future. Water demands in the Brazos River Basin are **expected to nearly triple** by 2060, faster than the statewide average, based on State Water Plan projections for Regions G and H. As a result:

- Competition for river water has fueled tensions among stakeholders in the watershed.
- Organizations from the upper and middle portions of the river basin are seeking to restrict the flow of water downstream.
- Cutting off flows harms downstream communities, agriculture, natural habitats and commerce.

SOLUTION

A fair allocation of river water is essential – and that requires:

- Balanced management of river water and flood control – based on sound science, engineering and law
- More water conservation
- Enforceable drought management
- Enhanced water supplies throughout the Brazos River Basin
