

Standard Product List

The City of League City's Standard Product List has been developed to minimize the submittal review of products which meet the city's Design Standards and Details during development and construction projects. When Technical Specifications for specific products are included as part of the Construction Contract Documents, the requirements of the Technical Specification will override. Requests for substitution must be evaluated and approved by the City Engineer prior to material purchase.

Reference on this list does not relieve the sealing engineer of the responsibility to select the equipment appropriate for the specific design or approved equal.

The following table represents the manufacturers and equipment models which have been pre-qualified:
